

FIA Biomass Sampling Effort Update, 2013

The Forest Inventory and Analysis (FIA) biomass team destructively sampled a total of six trees from the SFMA site just west of Lost Pond Road and south of Wadleigh Mountain Road (see attached pdf) identified with Rick Morrill, north northeast of Lost Pond. These are summarized by diameter and species in the table below. In the spring, preferably before leaf-on, as weather permits, we hope to return to the SFMA to continue sampling.

Species	DBH (inches)
Red maple	14.6
Red maple	19.2
Red maple	9.1
Sugar maple	7.8
Yellow birch	7.1
Eastern hophornbeam	5.0
